Video: Worldwide Protective Products Manufacturing Floor

Brought To You by Worldwide Protective Products | Jun 02, 2020

Video Highlights

Worldwide Protective Products utilizes their innovative manufacturing process to bring customers the gloves, sleeves and garments they want, while meeting protection standards. The manufacturing process at Worldwide begins with their proprietary yarns spun in-house. Stronger materials, such as fiberglass, are woven into the yarn to contribute to cut resistance. Once the yarns are created, they move onto the knitting phase of the process. The facility includes more than 400 knitting machines, pumping out product at rapid rates. After the product is created, depending on the nature of it, various finishing touches are executed (stitching on the cuffs, tags, stamps, etc.). Watch the process in this video, how the yarns turn into life-saving safety products.

Along with their unique yarns and innovative processes, **Worldwide Protective Products** is constantly looking for development opportunities. They work to deliver the highest level of comfort while not sacrificing safety for their customers.
