

Hearing Loss

Occupational Noise

Brought To You by Honeywell | Apr 08, 2020

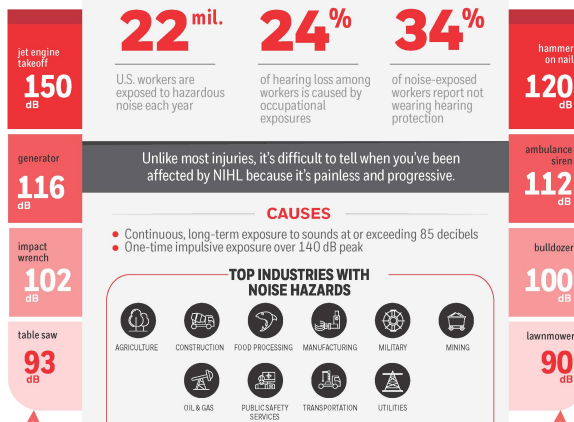

Noise-Induced Hearing Loss (NIHL) is the most common permanent and preventable occupational injury. In the infographic below, Honeywell shows the industries with the highest incidence of hearing loss, the effects of NIHL on workers and employers, and the different ways workers in these and other occupations can protect themselves.

OCCUPATIONAL NOISE

THE INVISIBLE HAZARD AND KEYS TO SUCCESSFUL HEARING PROTECTION

NOISE-INDUCED HEARING LOSS (NIHL) IS THE MOST COMMON PERMANENT AND PREVENTABLE OCCUPATIONAL INJURY

KEYS TO SUCCESSFUL HEARING PROTECTION

Occupational NIHL can be reduced or eliminated when proper measures are implemented

Wearers should:

- Be aware of jobsite noise risks
- Always use hearing protection where noise hazards exist
- Carefully follow fitting instructions to ensure protection
- Inspect, clean, and replace hearing protection devices (HPD) according to instructions

Employers should:

- Provide an assortment of hearing protection types and sizes to ensure workers achieve the 3 Cs
- Monitor noise levels and make necessary adjustments to reduce hazardous noise levels
- Educate workforce on the importance of using hearing protection devices and their proper use
- Avoid overprotection to ensure clear communication and the ability to hear warning signals
- Rely on Honeywell Howard Leight to help guide the selection process and ensure appropriate protection that meets the unique needs of your workforce
