VIDEO: Introducing HY-PRO® CARB VGM End Mill Series

Brought To You by OSG | Mar 01, 2021

The HY-PRO® CARB VGM end mill from OSG is a series of variable geometry end mills for dynamic milling ideal in steel and stainless steel. See it in action in the short video above (*music only, no transcript*).

Features:

Variable Index

Unequal flute spacing reduces vibration during machining by altering the timing of each flute engaging in the workpiece.

Unique Flute Geometry

Sharp rake angle, high helix and adjusted core diameter maintain excellent cutting edge sharpness and tool rigidity to promote smooth, stable cutting with low cutting force.

EXO Coating

OSG's proprietary multi-layer coating provides longer tool life through higher wear and heat resistance than conventional TiAlN coatings.

To learn more about the VGM series of end mills, download the brochure from OSG [*here*](#).
