VIDEO: KenTIP™ FS - FEG Inserts Perform Two Operations In One

Brought To You by Kennametal | Sep 14, 2021

KenTIP™ FS covers more applications and provides better performance than any other modular system, delivering substantial cost savings and process simplifications on your shop floor. FEG inserts with 180° point geometry for holes that require a flat bottom, performing two operations in one. In conjunction with the other KenTIP FS inserts (HPG, HPC, HPL geometries), the new FEG insert can be utilized as pilot drill point for deep-hole applications.

Features include:

- 180° point geometry for holes that require a flat bottom.
- Corner chamfer to reduce bur formation.
- Four margin lands for hole straightness and stability on inclined exits.

Watch it in action in the short video above.
