VIDEO: Cutting "Swiss Cheese" With The Mill 4™-12KT

Brought To You by Kennametal | Nov 30, 2021

Handling even the most severely interrupted cuts with ease, the *Mill 4™-12KT* is a staple of stability and strength when it comes to indexable milling. Tangentially mounted inserts have shallower pockets which allow for a larger core size of the cutter, very strong cutting edges on the inserts, and easy access to insert screws. Mill 4-12KT requires up to 15% less horsepower, enabling increased feed rates, even on small machines. The patented insert design — featuring a triangular shaped margin — provides unprecedented stability in steel and cast-iron applications. Watch the short video above to see how it performs in interrupted cuts at various feed rates.
