VIDEO: High-Feed Milling Solution for Open and Closed Pockets

Brought To You by Sandvik Coromant | Mar 15, 2022

Sandvik introduces the **CoroMill® MH20**, a high-feed milling solution. Primarily designed for pocketing applications with optimized geometries for ISO S, M and P, the CoroMill® MH20 ensures secure and vibration-free machining with long overhangs thanks to its light-cutting action in combination with a robust shank design. The inserts have a curved strong edge with reinforced corner radius ensuring secure and reliable machining against shoulders and corners in pocketing.
