## VIDEO: Romicron™ – High Performance Fine Boring System

Brought To You by Kennametal | Oct 03, 2022

## Features & Benefits

- Fits with any standard Kennametal ISO turning inserts, for a broad range of application and materials.
- £100% mechanical system with micron adjustment by hand or fully automated, for fast and easy diameter adjustments.
- EPrecise diameter adjustment, for scrap rate and set up time reduction.
- Eone click, one micron. Each click on the diameter adjustment ring is a precise one micron adjustment on the radius. See, feel, and hear it.

Increase productivity and performance in fine boring applications with the new Romicron™ from Kennametal. It is a high-precision system for large volume production where fully-automated fine boring applications with extremely tight tolerances are required. Covering a diameter range from 4–213mm (.1575–8.3858"), Romicron features a hole accuracy of up to IT6, hole cylindricity of up to 5 \mathbb{E}m and hole position of up to 5 \mathbb{E}m. Watch the video about eBore™ *here*.
