VIDEO: HOW TO Maximize Efficiency in Process Measurement

| Jun 28, 2023

Video Highlights

We all know that you don't make money on your parts unless they are fully in spec. Today, Jacob Sanchez, former CNC machinist and current engineer, is finding you more efficient methods of inspection without crowding up your QC lab floor!

Join us for this latest installment of "How To" where we travel to North Kingstown, Rhode Island for a tour of the Hexagon Manufacturing plant to learn "HOW TO: Maximize Efficiency in Process Measurement". You will see the latest in smart inspection technology through the Micro-Hite gauge, freeing up your quality control lab and giving your machinist peace of mind while running their parts.

For even more insights and expertise, check out MSC's Better MRO knowledge hub.

"How To" is a video content series from MSC Industrial Supply developed with the purpose of serving as a resource for all those who work in, support, and have a passion for the metalworking sector of the manufacturing industry.

Through How To, you'll gain hands-on, practical advice from industry experts currently working in the field. At MSC, we are dedicated to providing real-world practical advice to improve your day-to-day operations.

For more How To videos, check out our MSC How To playlist and subscribe to our YouTube channel.

And check out our other show, Tooling Up, on the MSC Tooling Up playlist.
