VIDEO: Predictive Maintenance of Driven Tool Holders

| Jun 18, 2024

Coromant Capto® DTH Plus driven tool holders are equipped with sensors. Data is presented to operators through a software application. This way, it is possible to predict the maintenance need of your driven tool holder and plan accordingly, resulting in better use of equipment. The quick-change functionality reduces time spent on measuring, set-up and tool change, allowing for improved machine utilization. *See it in action in the short video above (music only, no transcript).*
