VIDEO: Mahr Air Gaging

Brought To You by Mahr | Apr 01, 2025

Get a quick overview on Mahr Air Gaging, which has been around since the 1940s and was one of the first sub-micron measuring systems available. Mahr can produce non-contact air gaging in a wide variety of rings and disks. Air gaging can give users much more than just a diameter measuring as air gaging can also measure taper, squareness, straightness and complete part verification. Mahr air gaging does not have much operator influence and will give accurate and repeatable readings in almost any environment. *Learn more in this short video.*
