Video: What is The Future of Aerospace?

Brought To You by Boeing | Nov 10, 2017

The world has been abuzz with news that we may be getting closer to commercial space travel. But what really is the future of aerospace?

Video Highlights

- The future of aerospace is happening right now.
- Manufacturing needs in aerospace are not limited to the advanced capabilities happening in the future state of aerospace.
- The push for changes are both big and small. Hybrid planes that use both electric and traditional fuel sources to propel aircrafts through the air to new winglet designs that help increase efficiencies are some of the happenings in the future state.
- Small changes that the average traveler may not notice but the future of aerospace will make your journey more comfortable and help the planet along the way.
