

Personal Protective Equipment

ASSP Safety 2019 Video: What's New in Glove and Eyewear PPE?

| Jun 11, 2019

Video Highlights

- The latest gloves provide impact and vibration protection for both the palm and the top of hand.
- **MCR Safety** demonstrates the benefits of impact gloves made with its D3O material.
- For protective glasses, new lens coatings help with blue-light emission, scratching and fogging.
- Some new eyewear includes hearing protection too.

New features in personal protective equipment for hands and eyes provide both more protection and comfort for workers, as well as compliance with a broad range of regulatory standards.

When it comes to selecting gloves and the cut level, the first step is to identify the risks your workers will encounter on the job.

Participant:

- Mike Myrick, Marketing/Trainer, MCR Safety
