

Personal Protective Equipment

Vending-Friendly Packaging

Brought To You by MEGAComfort | Nov 20, 2019

There's one thing that most breakrooms have in common, immediate access to packaged food and beverages. Vending machines are accessible in workplaces across the country. Instead of taking a break with a Kit Kat bar at the vending machine, imagine providing your employees with the opportunity to access Personal Protective Equipment (PPE) with the touch of a button. PPE vending may sound like a futuristic prospect. Having the ability to provide your workers with the opportunity to purchase a healthier, long-lasting and productive solution so instantly does sound futuristic. However, PPE vending is sweeping the nation, offering employers and employees with an instant solution to reduce consumption, increase productivity, and eliminate inventory, leading to tremendous cost savings.

PPE vending machines not only help improve safety compliance and make safety accessible to everyone. These machines are custom built to fit the individual customer/workplace addressing the specific needs of that worksite. PPE vending machines are gaining popularity because they help customers improve inventory management in a simple, effective and efficient manner. They eliminate processing and administrative costs while reducing labor costs.

MEGAComfort's job has always been to reduce pain and fatigue with every step. Combining their highly acclaimed PAM insole with vending machine packaging was an obvious combination for their team. Workplaces that offer PPE vending give their employees the ability to access PPE by swiping their personal ID card, putting the employee in control of their ordering and safety solutions. Each transaction is monitored by the machine and operators can share logistics with management. Much like PPE vending offers an instant solution for workplaces wanting to improve their PPE ordering and productivity, MEGAComfort strives to create solutions that are impactful and efficient, which is why they offer their Personal Anti-Fatigue Mat Insole in PPE-friendly packaging.

As a work-life wellness solutions company, striving to be at the forefront of technological safety advancements, MEGAComfort's vending-friendly packaging allows companies to offer a cost-effective work-life wellness solution to all employees, regardless of their workstation. Their Personal Anti-Fatigue Mat insoles are clinically designed, utilizing patented dual-layer memory foam technology, and providing wearers with 360° workplace coverage. Vending-friendly packaging makes work-life wellness and safety an accessible, affordable, and easy solution for workplace fatigue and physical pain and discomfort. Much like the vending machines themselves, MEGAComfort's vending-friendly packaging is efficient since employees can step into comfort as soon as they need it.
